DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 11-18, drawn to an apparatus for testing for leaks in a fluid system including a smoke generator, classified in class 73, subclass 40.7.
- II. Claims 19-28, drawn to an apparatus and method for testing for leaks in a motor vehicle evaporative emission system based on fluid flow measurement, classified in class 73, subclass 49.7.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are a leak checker for a fluid system using a trace substance of group I and a leak checker for an evaporative emission system using fluid flow of group II. The structure and principles of operation for the two inventions are considered different.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
